Medbook Africa

PROJECT: Full-stack Software Developer

Duties and Responsibilities

- Am a frontend developer mostly the UI/UX and the co main functionalities of the user interface using angular
- Also I check on the logic and the endpoint APIS which I use to connect to frontend from the backend team.
- I was able to develop several modules like Billing Module, Registration and sign up and Emr module for patients.
- Also I designed the interface from scratch using sass and bootstrap combined it in angular 8 and typescript 3.4

Medbook Africa
PROJECT: Full-stack Software Developer
Duties and Responsibilities

- Design and come up with the UI/UX
- Consume services from Navision to front end users.

Solo Projects

I have been able to work on a distribution and accounting cms which favours small and large companies implemented with the best technologies in security and simple users interphase its also fully customisable to any company. Here is the link. https://officenip.com/

Also worked on an ecommerce system with mobile app and website with local payment integrations like mpesa and its fully customisable to any business.

Heres is a link to my portfolio and jobs that I have done .

I have worked for a start up company called Evotech innovations which was currently developing a payment gateway which will link all your payments may it a business or an individual in one place on an react native mobile app. The dashboard will be running on angular frontend and the API will be on spring boot (maven).

Developed a expense and aloan management system. Where the app is on react native and typescript and the admin dashboard is on react redux. It will be out next month.
